

Inherent E2E Lifecycle Fixture (PDF)

The quokka telemetry digest ZZE2EPDFQUOKKA recorded four hundred and twelve harbour crossings during the 2026 winter survey.

This PDF exists so the compose end-to-end lane can prove that a real binary PDF upload is extracted, chunked, embedded and made retrievable by the public search API. Inherent extracts text from PDFs and indexes the passages.

The survey team logged each crossing against a checkpoint identifier and a tide reading, then reconciled the totals against the harbour master's ledger.
